

Don't let them all go down

Treat and prevent
with Halocur[®]

Highly contagious, calf scours caused by *Cryptosporidium parvum* can take out every calf in a pen – and even spread to humans. Halocur® is the only product available that can treat scours caused by *Cryptosporidium* and be given to other calves in the pen to help prevent the spread of *Cryptosporidium* diarrhoea. By keeping Halocur at the ready, you'll give your calves the best chance of standing up to an outbreak of crypto.

To find out more about Halocur, visit www.healthycalves.co.nz

Or talk to your veterinarian about Halocur – the only product available that does more than just treat.
